

Following our motto "Demand everything", Hibox Systems focuses on developing advanced on-demand solutions for set-top-boxes, PC:s and mobile phones.

IPTV Solutions for Telcos

Hibox deluXe

Hibox deluXe is a complete IPTV middleware for delivering TV, Video-On-Demand and interactive services to customers in any IP-based network. Hibox deluXe transforms the television into a truly expedient and user friendly entertainment center, providing the user with all the main uses of a television, computer and other equipment. Using the Hibox deluXe solution the user has easy access to TV programs, movies, recordings and various interactive services.

Hibox PCTV

The Hibox PCTV-solution enables the customer to use all the services available on the set-top-box on a personal computer. Since Hibox PCTV is fully software based it does not require considerable investments in order to be marketed on a large scale as a separate product or as a free of charge supplementary service.

Hibox PCTV includes all the standard features of digital set-top-boxes, such as channel lists, TV-guide, information on programs and recordings. Hibox PCTV is a practical and expedient second television for any home.

Hibox Mobile

Hibox Mobile is the newest addition to the Hibox software suite. Using the service the subscribers have easy access to all content and functionality from their mobile phones. Currently supported devices include iPhones, Palm, Symbian and Window Mobile based smart phones.

Hibox Administrator

Hibox Administrator provides access control and usage statistics for content and services available to the customers. Hibox Administrator is an intuitive web based administration interface, facilitating the administration and implementation of new features and services requested by the operator. Thanks to the modular design services and overall system functionality can be customized to meet every customer's demand.

Case Study

www.tvkaista.fi

Since 2006 Hibox Systems has been developing a new catch-up-TV service that has received a lot of attention. The service, which is sold and marketed by TVKaista Ltd, has been described by both critics and consumers as the most expedient and user friendly catch-up-TV service in Finland.

Using the service subscribers are able to record TV programs or entire TV channels for two weeks on network recording servers. The service works in most web browsers and allows the users to use their existing devices, such as set-top-boxes, PC:s, Playstations, iPhones and other smart phones.

Key features:

- TV-channels- IPTV, DVB-T, DVB-C or DVB-S
- TV-On-Demand, Video-On-Demand
- Network-PVR, Timeshift-TV, Catch-up-TV
- Billing & provisioning
- STB - independent

Hospitality IPTV Solutions

Case Study

Omena Hotels

Omena Hotels is a new hotel chain, which offers high-class accommodation at a rate that is significantly lower than the general price level. What is new in Omena's way of operating is that the hotels have neither reception personnel nor a reception desk, and thus no check-in or check-out procedures. All possible work tasks have been fully automated using IT. This automated approach sets high requirements on the TV-system used in the hotel, as the guests should themselves, for instance, be able to communicate with the help desk personnel and pay for hotel services through the room television sets. Hibox's TV-system is used in all Omena hotels operating in Finland today.

Key features:

- Localized information services and advertisements
- Video-On-Demand
- Internet access - using the television set or a laptop
- Two way communication & messaging services
- Feedback forms and polls

Hibox HotelTV

Hibox HotelTV is one of the most modern and advanced TV-systems used in hotels today. The system enables the introduction of an entirely new electronic hotel service, taking hotel customer service to a new level. While being one of the technologically most modern solutions on the market, it is inexpensive, easy to use and reliable. The functionality and the appearance of the user interface are customized to each hotel or chain of hotels and the service is very user friendly. On request Hibox also develops tailored service packages to meet every customer's demand.

Hibox Receptionist

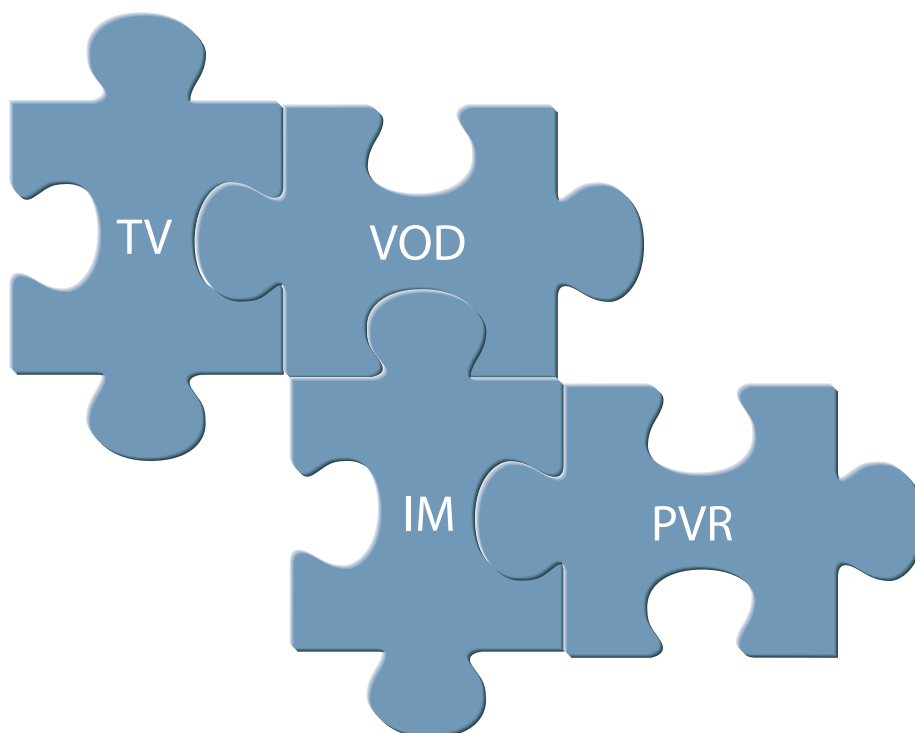

Hibox Receptionist is a complete solution for real estate owners that brings entirely new services to the homes of their residents. The system brings an interactive and fully customizable user interface to the home of each resident. Announcements and notifications can easily be distributed to all residents, and the information is received in real time. The system can be connected to applications such as video surveillance (front and back doors, parking spaces, playgrounds), reservations of the sauna and laundry room, repair and maintenance, etc.

Hibox Attendance

Hibox Attendance is an innovation in technology supported geriatric care. The service offers a real-time communication method and, thus, a feeling of security for the elderly or partly disabled people, who feel that living at home, gives them a more independent life of higher quality. In addition to Hibox's entertainment and information services, the system offers a direct order function, two-way video calls, as well as an alarm function. These services give added value to the user as well as the people close to the user. The system eases the burden on the caregiver, and gives the user unforeseen communication possibilities with friends, children and grandchildren as well as nursing staff.
