

Salon Seudun Puhelin buys turnkey IPTV system from Hibox Systems

Salon Seudun Puhelin, a telecommunications company in Finland, has bought a complete IPTV system including all software and hardware from Hibox Systems.

"We are strongly committed to the development of fibre networks and to the development of services for these networks. The Hibox IPTV solution supports our objective to offer our customers modern and competitive services of high quality. The solution also satisfies our development needs in the future. We are going to launch the service to our fibre network customer early this fall.", says Janne Tikkanen, the service offering manager at Salon Seudun Puhelin.

"Due to good cooperation within the Anvia group Hibox is able to offer highly competitive prices also on hardware. Hibox's flexible IPTV middleware in combination with powerful servers from IBM and set-top boxes from Motorola offer a complete IPTV solution, which could be taken into use in less than 6 weeks", says Andreas Öhman, CTO at Hibox.

With the IPTV-solution from Hibox the television is transformed into a multimedia centre. The user can choose to record TV programs either via a set-top-box or a web-based user interface on their PC. Additionally, the user can watch movies, read their e-mail, surf the Internet and play games on the TV. In order to be able to use the service a broadband connection of a minimum of 8 Mbit/s is required.

About Salon Seudun Puhelin

Salon Seudun Puhelin Ltd produces customer centric telecommunication solutions and maintains telecommunication networks. Customers of SSP are both private persons, companies, associations and other operators. The company resides within the Salo and Loimaa districts.
